

TIME FOR A CHANGE?

There are many reasons to replace old, inefficient poorly operating windows. Diagnosing what's best for you home and your budget starts with a complete inspection.

Poor Installation We're quick to blame windows unfairly for the drafts that we feel; often, it is the installation of those windows that is to blame. Sometimes, the solution to a drafty window is a matter of removing trim, foam sealing, and caulking around your existing window units.

Inefficient, Old, or Damaged Windows Single pane glass windows are notorious for being cold, frosty, and drafty – and are usually top priorities for replacement. But even double pane windows can fail – losing the seal between panes and acting more like a single pane window. Infrared scanning can help determine whether your double-paned windows are sealed properly.

Poor Operation, Seals and Hardware Latches, crank mechanisms, and weather stripping are usually the first things to fail on a window. When selecting new windows, look for sturdy hardware, redundant weather stripping and seals, and of course, detailed installation for years of smooth operation.

OUR MISSION

"To make your home more comfortable, durable, safe and energy efficient."

Since 2007, St. Croix Energy Solutions Inc. has made its mission to serve homeowners throughout Western Wisconsin and the Twin Cities Metro Area with comprehensive home performance solutions. Dedicated to quality work at a great value, we look forward to serving you with knowledgeable consultants, objective testing and diagnostics, and experienced, courteous, and professional installation. Call or Visit Us Online Today, and discover all the ways that St. Croix Energy Solutions Inc. can add value and comfort to your home:

- Home Energy Assessments

SELECTING THE RIGHT WINDOW

Windows are a lasting investment in the beauty, functionality and energy efficiency of your home, but with so many brands, types and options to choose from, how can you be sure you're making the right choice? At St. Croix Energy Solutions, we select windows based on some simple criteria – born out of our commitment to provide you with excellent performance at a great value.

- **Frame Materials** For a lifetime of worry free operation, we choose the proven durability of vinyl frames. Available in a variety of finishes from basic white to wood grain, or factory applied custom colors, vinyl is the no-maintenance solution.

- **Foam Filled Frames**

While strong on its own, we insist that all vinyl frame windows are filled with polyurethane foam; adding rigidity and R-Value to the frame, this simple step makes for a much more efficient window.

- **Thermal Performance** Insulated frames are only part of the equation – window glass is the star of the show. With dual pane, argon filled glass and composite glass spacers (not energy-sucking aluminum spacers), our windows offer superior insulation. Add to that a low-emissivity coating, and more heat is reflected back into the home, further improving window performance. Taken together, every window we install far exceeds the ENERGY STAR ratings for our climate zone. Have a special project in mind? We can customize glass options for increased solar gain, or upgrade to triple pane, krypton-filled glass for the ultimate in thermal performance.

- **Rock-Solid Warranty** We stand behind every window we install, and are at your service for all of your window needs. You benefit from our industry-leading Lifetime warranty on parts and construction – giving you peace of mind for as long as you own the home. And because your warranty is transferrable, you can pass along that peace of mind to the next homeowner, too.

St. Croix Energy Solutions Inc.

WHAT SETS US APART?

Not all window installers are created equal. After testing thousands of homes with depressurization equipment and infrared imaging, we have confirmed what many homeowners fear: that their new, replacement windows continue to be drafty and leaky due to shoddy, corner cutting installation practices.

Unlike the competition, we've made it our standard practice to offer true, complete window replacement. We remove the old window framing entirely, allowing access to every nook and cranny in the rough opening for complete air sealing and insulation using low-expansion foam and silicone caulking. We go the extra mile to ensure an air tight, no-maintenance product, and our efforts are reflected by hundreds of satisfied customers:

"I couldn't be happier— the finished product is spectacular. The guys at St. Croix Energy took extremely good care of us. They provided excellent communication, expert advice, and impeccable work with no mess. It was the best contractor experience I have ever had."
